ADMIN PANEL - FULL USER STORIES

Epic: Authentication & Access Control

- As an Administrator, I want to securely log in to the admin panel so that I can access system features.
- As an Administrator, I want to log out so that unauthorized users cannot access the system.
- As an Administrator, I want to reset my password so that I can recover my account if credentials are forgotten.
- As an Administrator, I want to change my password so that I can maintain account security.

Epic: Dashboard & Operational Visibility

- As an Administrator, I want to view a dashboard so that I can quickly understand operational status.
- As an Administrator, I want to see attendance summaries so that I can monitor workforce availability.
- As an Administrator, I want to view project progress so that I can track organizational performance.
- As an Administrator, I want to see employees currently on leave so that I avoid scheduling conflicts.
- As an Administrator, I want to view upcoming deadlines so that urgent jobs are prioritized.
- As an Administrator, I want to view today's scheduled shifts on the dashboard so that I can quickly understand daily workforce allocation.
- As an Administrator, I want quick navigation from the dashboard so that I can efficiently access modules.

Epic: Employee Lifecycle Management

Employee Creation & Onboarding

- As an Administrator, I want to onboard employees so that they can access the platform.
- As an Administrator, I want the system to send onboarding invitations so that employees can complete registration.
- As an Administrator, I want newly added employees to remain inactive until approved so that unauthorized access is prevented.

Verification & Approval

- As an Administrator, I want to review submitted employee details so that I ensure accuracy.
- As an Administrator, I want to view employee documents so that compliance requirements are met.
- As an Administrator, I want to approve or reject employee submissions so that only verified employees become active.
- As an Administrator, I want rejected submissions to trigger resubmission requests so that missing information is corrected.

Employee Management

- As an Administrator, I want to edit employee information so that records remain up to date.
- As an Administrator, I want to assign roles to employees so that permissions align with responsibilities.
- As an Administrator, I want to activate, deactivate, or suspend accounts so that I can control system access.
- As an Administrator, I want to search and filter employees so that I can quickly locate records.

Epic: Company Management

- As an Administrator, I want to create companies so that client organizations are structured in the system.
- As an Administrator, I want to edit company details so that organizational data remains accurate.
- As an Administrator, I want to delete companies so that obsolete entities are removed.
- As an Administrator, I want to associate projects with companies so that work is properly organized.

Epic: Project Management

- As an Administrator, I want to create projects so that work can be grouped logically.
- As an Administrator, I want to view project details so that I understand scope and ownership.
- As an Administrator, I want to edit projects so that updates are reflected.
- As an Administrator, I want to delete projects so that outdated work is removed.
- As an Administrator, I want to filter projects by company or site so that navigation is efficient.

Epic: Site Management

- As an Administrator, I want to create sites so that physical work locations are tracked.
- As an Administrator, I want to assign sites to companies so that organizational hierarchy is maintained.
- As an Administrator, I want to edit site details so that location data remains accurate.
- As an Administrator, I want to delete sites so that unused locations are removed.
- As an Administrator, I want to search and filter sites so that I can quickly find them.

Epic: Job & Role Management

Job Roles

- As an Administrator, I want to create job roles so that employees have defined responsibilities.
- As an Administrator, I want to edit job roles so that role definitions stay relevant.
- As an Administrator, I want to delete unused roles so that the system remains clean.

Jobs

- As an Administrator, I want to create jobs linked to projects and sites so that assignments are structured.
- As an Administrator, I want to edit job details so that changes are reflected.
- As an Administrator, I want to delete jobs so that invalid assignments are removed.
- As an Administrator, I want to search and filter jobs so that I can quickly access them.

Epic: Shift & Workforce Scheduling

Shift Creation

- As an Administrator, I want to create shifts with date, time, job, site, and assigned employees so that workforce scheduling is efficient.
- As an Administrator, I want the shift name to auto-populate based on predefined attributes (such as job, site, and shift time) so that manual entry is reduced and naming remains consistent.
- As an Administrator, I want to create multiple shifts at once for multiple dates so that I can efficiently schedule recurring work.
- As an Administrator, I want to assign multiple employees to a shift so that team-based work is supported.

Shift Monitoring

- As an Administrator, I want to view shift details so that I can verify assignments.
- As an Administrator, I want to see employee acknowledgement so that I know whether shifts were accepted.
- As an Administrator, I want to see clock-in and clock-out times so that attendance is validated.

Shift Modification

- As an Administrator, I want to edit shifts so that scheduling conflicts can be resolved.
- As an Administrator, I want to delete shifts so that incorrect schedules are removed.

Epic: Attendance Exception Handling

Early Clock-Out / Late Clock-In

- As an Administrator, I want to review early clock-outs so that I can validate attendance.
- As an Administrator, I want to view reasons for early exits so that I can make informed decisions.
- As an Administrator, I want to approve or reject early exit requests so that attendance records remain accurate.

Epic: Leave Management

- As an Administrator, I want to view leave requests so that I can manage workforce availability.
- As an Administrator, I want to approve or reject leave so that staffing levels remain stable.
- As an Administrator, I want leave statuses (Approved, Pending, Rejected) clearly displayed so that decisions are transparent.

Epic: Reports & Analytics

Attendance

- As an Administrator, I want to view attendance report so that employee working hours are tracked.
- As an Administrator, I want to verify attendance with clocked in clocked out photos so that fraud is reduced.

Performance

- As an Administrator, I want to download performance reports for weekly and any date range so that productivity can be evaluated.
- As an Administrator, I want individual employee reports for weekly and any date range so that performance reviews are easier.

Filtering

- As an Administrator, I want date-range filters so that I can analyze trends.

Epic: Real-Time Location Tracking

- As an Administrator, I want to view employee locations during shifts so that site compliance is ensured.
- As an Administrator, I want to see clocked-in employees on a map so that attendance is validated.

Epic: System Monitoring & Audit

- As an Administrator, I want to view login history so that security audits are supported.
- As an Administrator, I want system activity logs so that all critical actions are traceable.

Epic: Settings

- As an Administrator, I want to update my password so that my account stays secure.

Epic: Notification & Alert Management

- As an Administrator, I want a centralized notification panel so that I can view all system alerts in one place.
- As an Administrator, I want unread notifications to be highlighted so that I do not miss critical updates.
- As an Administrator, I want to mark notifications as read so that I can manage my alert list.
- As an Administrator, I want notifications sorted by newest first so that recent events are prioritized.
